WESTERN OPERATIONS, SAN BERNARDINO FACILITY

Pelican Products Inc.
23215 Early Avenue
Torrance, CA 90505

Our Job No. DE 52554
Contract —
Your P.O. No. 42323
Date October 11, 2005

**TEST REPORT
FOR
ENVIRONMENTAL TESTING
OF
CASES
FOR
PELICAN PRODUCTS, INC.**

STATE OF CALIFORNIA }
COUNTY OF SAN BERNARDINO } ss.

Douglas G. Anderson

being duly sworn, deposes
and says: That the information contained in this report is the result of
complete and carefully conducted tests and is to the best of his knowledge
true and correct in all respects.

[Signature]
SUBSCRIBED and sworn to before me this 12 day of Oct, 2005
by Douglas G. Anderson personally known to me or proved to me on the
basis of satisfactory evidence to be the person who appeared before me.

For G. Montgomery

This report contains true and correct data obtained in the performance of the test program set forth in your purchase order. Test methods, results, and equipment used are recorded on these data sheets.

Where applicable, instrumentation used in obtaining this data has been calibrated using standards which are traceable to the National Institute of Standards and Technology.

SUMMARY:

Twenty-Four (24) Cases, part numbers and serial numbers as listed on pages 3-5 , were subjected to the following environmental tests in accordance with specifications as listed:

Test	Specification	Report Page No.
Vibration Test K	DEF STAN 81-41 Part 3/4, Para. 14 and 24	7
Low Temperature Test G	DEF STAN 81-41 Part 3/4, Para. 21	48
Dry Heat Test C	DEF STAN 81-41 Part 3/4, Para. 14 and 17	52
Impact Test E	DEF STAN 81-41 Part 3/4, Para. 14 and 19	57

Complete test requirements, methods and results are contained in this report. Also included are photos and equipment lists.

Test Dates: 9/17/05-10/1/05

DATA SHEET

Customer Pelican Products, Inc. Job No. 52554
Date 9/15/2005
Specimen Cases

RECEIVING INSPECTION

No. of Specimens Received: 24 (Twenty-Four)

Record identification information exactly as it appears on the tag or specimen:

Manufacturer: Pelican Products, Inc.

P/N's	<u>1120-001-110</u>	S/N's	<u>00019428015220</u>
	<u>1150-001-110</u>		<u>00019428012366</u>
	<u>1200-001-110</u>		<u>00019428007577</u>
	<u>1300-001-110</u>		<u>00019428021825</u>
	<u>1400-001-110</u>		<u>00019428012076</u>
	<u>1450-001-110</u>		<u>00019428007317</u>
	<u>1490-001-110</u>		<u>00019428003319</u>
	<u>1500-001-110</u>		<u>00019428002374</u>
	<u>1510-001-110</u>		<u>00019428039639</u>

How does identification information appear: (name plate, tag, painted, imprinted, etc.)
Imprinted

Examination: Visual, for evidence of damage, poor workmanship, or other defects, and completeness of identification.

Inspection Results: There was no visible evidence of damage to the specimen(s) unless otherwise noted below.

See attached spread sheet for dimensions and weights of all test specimens.

DATA SHEET

Test Title Pre-conditioning & Vibration Test K

Customer Pelican Products, Inc. Job No. 52554
Specimen Cases Date Started 9/17/2005
Part No. See Recv. Insp. Serial No. See Recv. Insp. Date Comp. 9/26/2005
Spec. DEF STAN 81-41 Part3/4 Par. 14 and 24 Photo Yes Amb. Temp. Controlled

Requirements:

Pre-Conditioning:

Temperature: 25 ± 10 °C
Humidity: 45% to 75%
Duration: 16 hours or until specimen has reached temperature stabilization (whichever is the shortest period)

Vibration:

Test Level: ± 0.23 " (± 6 mm) peak (0.46" DA) from 5 to 9 Hz and $\pm 2g$ peak from 9 to 350 Hz
Sweep Rate: 0.75 ± 0.25 Octave
Test Duration: Depending on test specimen weight, see below
Orientation: Depending on test specimen weight see below

Test Method:

Weigh the test specimen.

Place the test specimen in a test chamber on the face on which it normally is expected to be transported or stored. Install a thermocouple on the test specimen. Maintain the chamber at 25 ± 10 °C and 45% to 75% relative humidity for 16 hours or until the specimen has reached temperature stabilization (i.e. test specimen temperature stable with chamber temperature).

After pre-conditioning:

Immediately after removal from the conditioning chamber strap the test specimens to a vibration machine. Subject the test specimens to the following vibration test. Axis designations are to be Top to Bottom, Side to Side, and Front to Back.

(Continued)

DATA SHEET

Test Title Pre-conditioning & Vibration Test K Date 9/17/2005
Customer Pelican Products, Inc. Job No. 52554
Specimen Cases Technician I. Garcia *26 9-26-05*
Part No. See Recv. Insp. Serial No. See Recv. Insp. Engineer H. Pemberton *HP 9-26-05*

(Continued)

For each test specimen whose weight is up to and including 154.3 pounds (0-70 kg), vibrate each test specimen for 2 hours in each of the three mutually perpendicular axis at a vibration amplitude of $\pm 0.23''$ (± 6 mm) peak (0.46" DA) from 5 to 9 Hz and $\pm 2g$ peak from 9 to 350 Hz and a sweep rate of 0.75 ± 0.25 octave.

NOTE: If because of the geometry of the test specimen , it is considered impractical or unnecessary to vibrate the test specimen in a particular axis, the test specimen shall be vibrated for 3 hours in each of the two remaining axis.

Perform a visual examination. Any malfunction of the fittings and hardware (seals, closures, hinges, handles, etc.) and any damage to or spillage of the package contents shall constitute a failure of the specimen. Minor visible deterioration of the test specimen shall be noted but does not necessarily constitute failure of the test specimen.

Test Results:

The test was performed in accordance with the Test Method and Requirements stated above. No visible evidence of damage to the test specimens was observed upon completion of testing.

DATA SHEET

Test Title Low Temperature Test G

Customer Pelican Products, Inc. Job No. 52554
Specimen Cases Date Started 9/26/2005
Part No. See Recv. Insp. Serial No. See Recv. Insp. Date Comp. 9/27/2005
Spec. DEF STAN 81-41 Part3/4 Par. 21 Photo Yes Amb. Temp. Controlled

Requirements:

Temperature: -20 ± 2 °C
Duration: 16 ± 0.5 hours after specimen has reached test temperature
or 7 days \pm 1 hour if time required for the complete package
to attain the temperature cannot be assessed

Test Method:

Place the test specimen in a test chamber on the face on which it normally is expected to be transported or stored. Install a thermocouple on the test specimen. Decrease the chamber temperature to -20 ± 2 °C at a rate not to exceed 3 °C per minute. Maintain the chamber at -20 ± 2 °C for either:

- 1) 16 ± 0.5 hours after specimen has reached test temperature or
- 2) 7 days \pm 1 hour if time required for the complete package to attain the temperature cannot be assessed.

Return the chamber temperature to 20 ± 10 °C at a rate not to exceed 3 °C per minute.

Perform a visual examination. The package is considered to have failed if it is unserviceable or is affected in any way which would potentially cause the test specimen to become unserviceable.

Test Results:

The test was performed in accordance with the Test Method and Requirements stated above. No visible evidence of damage to the test specimens was observed upon completion of testing.

DATA SHEET

Test Title Pre-conditioning & Dry Heat Test C

Customer Pelican Products, Inc. Job No. 52554
Specimen Cases Date Started 09/27/05
Part No. See Recv. Insp. Serial No. See Recv. Insp. Date Comp. 9/29/2005
Spec. DEF STAN 81-41 Part3/4 Par. 14 and 17 Photo Yes Amb. Temp. Controlled

Requirements:

Pre-Conditioning:

Temperature: 25 ± 10 °C
Humidity: 45% to 75%
Duration: 16 hours or until specimen has reached temperature stabilization (whichever is the shortest period)

Dry Heat Test:

Temperature: 55 ± 2 °C
Humidity: Not to exceed 75%
Duration: 48 ± 1 hours

Test Method:

Place the test specimen in a test chamber on the face on which it normally is expected to be transported or stored. Install a thermocouple on the test specimen. Maintain the chamber at 25 ± 10 °C and 45% to 75% relative humidity for 16 hours or until the specimen has reached temperature stabilization (i.e. test specimen temperature stable with chamber temperature).

Increase the chamber temperature to 55 ± 2 °C at a rate not to exceed 3 °C per minute. Humidity is not to exceed 75%. Maintain the chamber at these conditions for 48 ± 1 hours.

Return the chamber temperature to 20 ± 10 °C at a rate not to exceed 3 °C per minute.

Perform a visual examination. The package is considered to have failed if it is unserviceable or is affected in any way which would potentially cause the test specimen to become unserviceable.

DATA SHEET

Test Title Pre-conditioning & Impact Test E

Customer Pelican Products, Inc. Job No. 52554
 Specimen Cases Date Started 9/30/2005
 Part No. See Recv. Insp. Serial No. See Recv. Insp. Date Comp. 10/1/2005
 Spec. DEF STAN 81-41 Part3/4 Par. 14 and 19 Photo Yes Amb. Temp. Controlled

Requirements:

Pre-Conditioning:

Temperature: 25 ± 10 °C
 Humidity: 45% to 75%
 Duration: 16 hours or until specimen has reached temperature stabilization (whichever is the shortest period)

Test Method:

Weigh the test specimen.

Place the test specimen in a test chamber on the face on which it normally is expected to be transported or stored. Install a thermocouple on the test specimen. Maintain the chamber at 25 ± 10 °C and 45% to 75% relative humidity for 16 hours or until the specimen has reached temperature stabilization (i.e. test specimen temperature stable with chamber temperature).

After pre-conditioning:

Immediately after removal from the conditioning chamber perform the following vertical impact test. Drop configurations, as applicable, shall be designated top (1), right side (2), base (3), left side (4), near end (5), and far end (6).

For each test specimen whose weight is up to and including 66 pounds (0-30 kg), drop each test specimen once onto its designated base and all perpendicular and parallel faces onto a non-deformable surface at a height of 39.4 ± 0.2 " (1000 ± 5 mm).

Perform a visual examination. Any malfunction of the fittings and hardware (seals, closures, hinges, handles, etc.) and any damage to or spillage of the package contents shall constitute a failure of the specimen. Minor visible deterioration of the test specimen shall be noted but does not necessarily constitute failure of the test specimen.

Test Results:

The test was performed in accordance with the Test Method and Requirements stated above. No visible evidence of damage to the test specimens was observed upon completion of testing. However, as delineated on in the attached data sheets, the following results were observed:

Specimen	Results
340	Label tag fell off during base drop. All clamps open during base drop however lid did not open.
350	Label tag fell off during near end drop.
370	No anomalies observed.
1120	No anomalies observed.
1150	No anomalies observed.
1200	No anomalies observed.
1300	Some clamps open during top drop however lid did not open.
1400	Some clamps open during base and top drops however lid did not open.
1430	No anomalies observed.
1450	All clamps open during top drop however lid did not open.
1490	Some clamps open during near end drop however lid did not open.
1500	No anomalies observed.
1510	No anomalies observed.
1520	Label tag fell off during near end drop.
1550	No anomalies observed.
1560	Some clamps open during near end drop however lid did not open.
1600	No anomalies observed.
1610	Some clamps open during top drop however lid did not open.
1620	Label tag fell off during base drop.
1650	Some clamps open during base drop however lid did not open.
1660	Label tag fell off during base drop. Some clamps open during top drop however lid did not open.
1700	Some clamps open during base, near end, and back drop however lid did not open. Some clamps open during top drop and right corner did open.
1720	Some clamps open during base, near end, right side, and left side drops however lid did not open.
1750	Some clamps open during base drop however lid did not open.
