heated and 15%-20% more resin accumulates in the corners and edges. When the case is dropped (and it will be) it has extra strength where it is needed.

Recessed hardware, columnar ribs. Recessed handles, latches and hinges prevents them from being sheared off during transport. Ribs are molded in to create incredibly strong forms from lightweight material. Cases of like sizes have matching top and bottom ribs, so they won't shift when stacked.

Watertight tongue and groove seal. Keep your gear dry and dust-free in the harshest environments.

Anti Shear locks. Molded, interlocking blocks are matched around the rim of the case. When the case takes an impact, the lid stays aligned to the base.

Bells and whistles. With accessories and custom services from our Advanced Case Centers, a Pelican-Hardigg Case can be a lot more than a box. Next we'll share some important options.

Selecting case hardware- it's all about you.

Getting your equipment safely from point A to point B is paramount. To move your case around you might need wheels, or if the load is extreme we can install forklift spacers and a bash-plate. We can also help you with technical choices, such as standard or mil-spec purge valves (prevents vacuum lock in the event of altitude change). The list goes on: from handles and latches to desiccant chambers for removing humidity from the case. You'll find an overview of common accessories on page 25.

Hard protection systems.

When foam is not appropriate, Pelican specializes in custom metal work. Cradles or

THE WIDEST SELECTION OF CASES IN THE WORLD.

In the beginning, a wooden crate fell apart. And then a corrugated box got wet. To make things worse, overweight metal cases showed up with sheared-off handles. That's when

Pelican-Hardigg Cases arrived, manufactured from polyethylene. Durable and waterproof, with recessed handles and integrated stacking ribs. The year was 1969, and we've been adding new sizes and perfecting Pelican-Hardigg Cases ever since.

Why Rotational Molding?

The advantages of rotational mold manufacturing are significant. Following are a few prime reasons:

More material in the corners. A Pelican-Hardigg Single Lid Case begins as resin powder that is measured and loaded into a mold attached to a biaxial arm. As the mold rotates, it is

Planned protection: custom foam awaits fragile equipment.

Drop tests, immersion, temperature extremes, G-force and vibration: we do it all to prove our cases perform to your specifications

We've got you covered.

Whether you need one empty case or a run of engineered cases for an extreme application, Pelican has the right size and the right team to get it done. In addition to our primary manufacturing facilities in the USA and Europe, there's a regional Advanced Case Center near you ready to help. Just call **1-800-542-7344** and we'll get you the right case for the job.

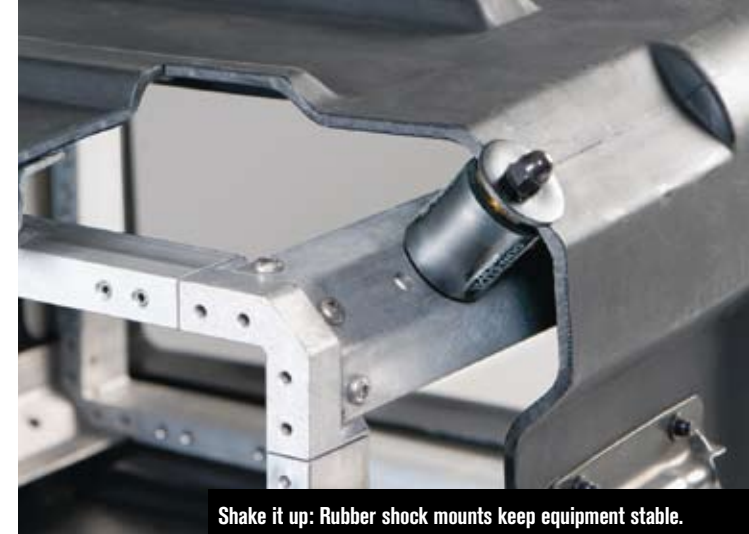

frames hold sensitive parts away from the walls of the case. The area between the frame and the case is the "sway space", and dampeners are used to isolate the part from shock and vibration. Dampeners can be mounted foam bumpers, or elastomeric shock mounts that can mitigate impacts up to 15 G forces.

Testing... 1-2-3.

The time to find out if your equipment is going to arrive intact is before it ships. That's why we have a full service test lab to verify survivability. As a matter of fact, Pelican operates one of the few certified test labs in the country.

Extreme case work: Engineered cradles for secure transport.

Shake it up: Rubber shock mounts keep equipment stable.
