

THE 9430IR INFRARED REMOTE AREA LIGHTING SYSTEM

> **9430IR: MAINTAIN STEALTH/NEUTRALIZE THREAT**

UNRETOUCHED PHOTOS

Photographed using NV Optics from 25 yards in complete darkness, without infrared light.

The 9430IR spotlight reveals weapons in hand and back pocket.

Pelican's new **9430IR** (infrared) spotlight reaches down-range to provide situational awareness without compromising stealth. 24 infrared lamp modules generate light visible only to forces equipped with night vision equipment. Capable of operating 75 yards out, the 9430IR extends the tactical advantage of night vision technology.

Covert Checkpoint: Now soldiers can establish covert NV checkpoints to assess threats and provide advance warning to exposed personnel.

Perimeter Security: The 9430IR can be hand carried to remote locations. Equipped with night vision and digital communication, forces outside the perimeter can remain invisible and silent while using the 9430IR to report enemy movement.
